REAL WORLD EVIDENCE: “WHERE ARE WE”

PROGRAM SUMMARY

This Symposium focuses on discussing and exploring the use of real-world data and evidence in healthcare and related industries. In recent years, the healthcare landscape has witnessed a growing interest in leveraging real-world evidence to make informed and evidence-based decisions. The traditional model of relying solely on controlled clinical trials has limitations, and there is recognition that real-world data can provide valuable insights into the safety, effectiveness, and impact of treatments, interventions, and medical products in real-world settings.
